1 Introduction

Movement is the one of the first complex actions that we learn when we born. It defines how we interact with the world around us. When moving our bodies we are not simply performing an action aiming to achieve a direct and explicit result, but most of the times we are also communicating with others. For this reason the research in human movement has branches in various fields of studies such as psychology, biomechanics, physiology and sociology

2 Motivation

The analysis of human movement

3 Aim

What you hope to achieve

Statements of intent. They are usually written in broad terms. They set out what you hope to achieve at the end of the project

4 State of Art

This section reviews and summarizes the existing knowledge and research relevant to your topic. It critically analyzes previous studies and identifies gaps that your research aims to fill

4.1 Origin of Movement

5 Methodology

Tools and strategies used

6 Results

Here the main achieved or potential results. Use in case tables, figures, etc.

7 Conclusions

Here recall the overall project done, and in case of findings some suggestions for future works.
